

THE GRAZIER™ SYSTEM

Patent Pending

IMPORTANT SET-UP INFORMATION

The Grazier System's unique corner bracing system must be set up correctly to achieve the System's superior strength.

Braces DO NOT go in line with the fence line. Braces must be placed **OUTSIDE** or **OPPOSITE** the fence line. Fence tension **PULLS AGAINST** the corner leg braces.

Once properly set into good soil or sod, or with appropriate Grazier accessories where needed, the System will be superbly strong and stable.

But if set incorrectly, with the braces in line with the fence, mere fingertip pressure can topple the corners!
